

American Elements Carbon Nanoparticles

Category : Metal , Pure Element

Material Notes:

General DescriptionCarbon (C) Nanoparticles, nanodots or nanopowder are black spherical high surface area graphitic carbon. Nanoscale Carbon Particles are typically 10 - 45 nanometers (nm) with specific surface area (SSA) in the 30 – 50 m²/g range and also available in with an average particle size of 75 - 100 nm range with a specific surface area of approximately 2 - 10 m²/g. Nano Carbon Particles are also available in passivated and Ultra high purity and high purity and coated and dispersed forms.
