

DuPont™ Nomex® 419 Paper, 13 mil Nominal Thickness

Category: Other Engineering Material, Composite Fibers, Polymer, Film, Thermoset, Aramid

Material Notes:

Nomex® Type 419 is the uncalendared precursor of Nomex® Type 418. It is used in applications in which its lower density allows improved conformability and saturability. General NOMEX Information: Nomex® is a family of aromatic polyamide (aramid) fibers. This family consists of staple fibers, continuous filament yarns, paper, and spunlaced fabrics. The paper is produced from two forms of the aramid polymer. Small fibrous binder particles (fibrids) derived directly from the polymer under high shear conditions are mixed with short fibers (floc) which are cut to length from a fiber filament. The floc and fibrids are combined in a water based slurry from which a continuous sheet is produced on a specialized papermaking machine. This initial paper (as in Type 419) is low density and has poor properties. Subsequent densification and internal bonding is achieved by high temperature calendaring. The resulting paper is mechanically strong and has good electrical properties. Some uses for paper product include insulation in electric motors and transformers, wire wrapping, and honeycombed strength members in many aircraft. Nomex® brand fibers are inherently flame resistant: the flame resistance is a polymer property and does not diminish with the life of the fiber. Nomex® meta-aramid, poly(meta-phenyleneisophthalamide), is prepared from meta-phenylenediamine and isophthaloyl chloride in an amide solvent. It is a long chain polyamide in which at least 85% of the amide linkages are attached directly to two aromatic rings. The meta oriented phenylene forms bends in the polymer chain, reducing chain rigidity as compared to the para orientation in the chemically similar Kevlar® chain. This flexible polymer chain gives Nomex® more textile-like qualities while retaining high temperature properties similar to Kevlar®. Information provided by DuPont.

Physical Properties	Metric	English	Comments
Bulk Density	0.440 g/cc	0.0159 lb/in³	
Density	0.440 g/cc	0.0159 lb/in³	
Thickness	330 microns	13.0 mil	Nominal
	351 microns	13.8 mil	Typical; TAPPI-411

Mechanical Properties	Metric	English	Comments
Film Elongation at Break, MD	1.99 %	1.99 %	ASTM D828
Film Elongation at Break, TD	2.4 %	2.4 %	ASTM D828
Tear Strength, Total	6.00 N	1.35 lb (f)	Initial in TD; ASTM D1004
	8.00 N	1.80 lb (f)	Initial in MD; ASTM D1004
Elmendorf Tear Strength, MD	0.394 g/micron	10.0 g/mil	Calculated from mfr's report of 1.4 N per TAPPI-414 and the typical thickness
Elmendorf Tear Strength, TD	0.512 g/micron	13.0 g/mil	Calculated from mfr's report of 1.8 N per TAPPI-414 and the typical thickness

Mechanical Properties	Metric	English	Comments from mfr's report of
Film Tensile Strength at Break, MD	8.60 MPa	1250 psi	typical thickness
Film Tensile Strength at Break, TD	5.70 MPa	827 psi	Calculated from mfr's report of 20 N/cm per ASTM D828 and the typical thickness

Thermal Properties	Metric	English	Comments
Maximum Service Temperature, Air	220 °C	428 °F	Electrical insulation
Shrinkage, MD	0.10 %	0.10 %	at 240°C
Shrinkage, TD	0.00 %	0.00 %	at 240°C
