## Freudenberg Simrit SimrizÂ® 483 Low Temperature FFKT Perfluoroelastomer Compound <br> Category : Polymer , Thermoset , Fluoropolymer, TS , Thermoset Fluoroelastomer , Rubber or Thermoset Elastomer (TSE)

#### Abstract

Material Notes: Perfluoro elastomers â $€^{\prime \prime}$ or FFKM for short â $€^{\prime \prime}$ have an ideal combination of characteristics, with their excellent chemical resistance, high level of temperature resistance, and high levels of elasticity. SimrizÂ® perfluoro elastomers close the material gap between inelastic PTFE and elastomers, which have poor temperature and chemical resistance properties. With a fluoridation level of 72\%, FFKM elastomers have a level of resistance close to that of pure PTFE at $76 \%$. At the same time, FFKM materials are so elastic that they are excellently suited to both static and dynamic seals. Simrit offers ISC O-Rings which are specifically optimised with respect to flexibility at low temperatures, resistance to high temperatures, hardness, tensile strength, elongation, compression set, or color.Information provided by FreudenburgNOK.
