

Silberline L-2422-PA

Category : Other Engineering Material , Additive/Filler for Polymer

Material Notes:

L-2422PA is a small particle size, bright leafing aluminum pigment based on standard cornflake geometry. It is a cost effective pigment for producing strong metallic effects with good coverage in liquid flexographic and gravure ink systems. This grade is produced as a pigment paste carried in isopropyl alcohol, but is not treated to inhibit the aluminum-water gassing reaction. L-2422PA is not recommended for use in aqueous inks unless a careful evaluation of its stability in the final ink formulation produces acceptable results. Applications: Printing Inks
